

Front View:

Current Limit can be modified with a precision trim-pot.

Just like a water tap, if you turn clock-wise you close, and if you turn anti-clockwise, you open up for more current.

The precision trim-pot has 24 full revolutions and the set range is about + / - 50% of rated current.

As you turn the pot to either end of the set-range you will feel a resistance and hear a click sound.
